You've got a problem - your hard disk is fried!

You got no work done today (you can't burn down any effort on your task). You're going to be unable to work for a while. That is...unless you were pairing.

If you were working alone on a task, don't burn down any effort, and roll the die to see how many additional days you'll be out. Don't forget to move your marker to Out of Office. Alternatively, if you were pair- or mob-programming, then you can ignore this card.
